

iCA eConnector™

Secure Bi-directional Connectivity for NetSuite

For customers who need to securely move files bi-directionally between NetSuite and 3rd party servers, iCloudAuthority eConnector for NetSuite automates transmission of all file types without the use of middleware. Files are sent using 2048 bit RSA encryption over SFTP (Secure File Transmission Protocol) and dropped at a specified endpoint, including Banks, ERP Systems, Factoring, Shipping, Suppliers, and Customers with no limits or extra fees.

HOW DOES IT WORK?

1. We'll determine your connection requirements and configure the SFTP connections between NetSuite and any server.
2. Once setup, the process is automated; schedule eConnector to transmit files automatically or receive files directly into NetSuite for processing.

Up and Running
in as little as
3 Mins

WHAT TO EXPECT?

1. Increased staff efficiency; eliminates manual processing
2. High scalability
3. 99.8% reliable with strong security
4. Excellent visibility of status
5. Quick deployment

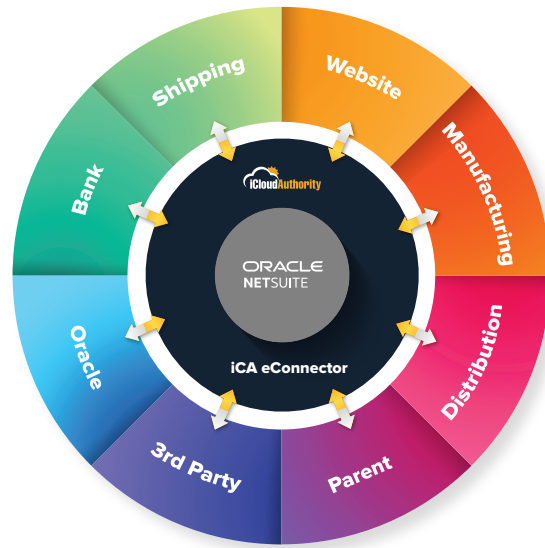

“A very welcome add-on. It does exactly what it’s supposed to and efficiently cuts out the steps of having to download payment files from my email and then logging in to the bank to upload the files, which is several steps itself. I’m a fan, so thumbs up!

Sowmya Ranganathan

FEATURES

1. Automated inbound and outbound transmissions
 - a. Schedule recurring inbound and outbound connections
 - b. Supports manual one-time uploads and downloads when needed
2. Natively built inside NetSuite
 - a. No additional middleware, 3rd party hosting, or data routing required
 - b. Resides within the NetSuite interface
 - c. Stores all configurations and backup files within NetSuite
3. Secure transmissions
 - a. 2048 bit RSA public/private key encryption
 - b. All passwords and URLs are encrypted
4. Scalable connections with no ‘per file’ fees
 - a. Supports all types of files
 - b. Connect to Banks, ERP Systems, Factoring, Shipping, Suppliers, Customers, and more
 - c. Setup additional connections to the same or other endpoint in minutes
5. “At-a-Glance” transmission status reporting
 - a. Validates transmission success and errors
 - b. Provides detailed reporting on the Connection Dashboard
